## PORTRABLE MULTIFUNCTION DATA-LOGGER INSTRUMENT DO9847

**DO9847** is a multifunctional handheld board instrument and datalogger. It is provided with a 128x64 pixel (56x38 mm) graphic display and three independent inputs. Each input can be connected to one channel or two channel dual probes (ex. two thermocouples, relative humidity /temperature, etc.).

The instrument automatically acknowledges SICRAM probes connected to the input (memory equipped and configurable intelligent probe). Functions: watch, hold, max., min., average, record, immediate or deferred start record logging, difference between the two inputs, relative measures, three input channel measurement and inside reference temperature display. Sampling time: one per second/input.

Probe calibration through SICRAM module; calibration data permanent storage

inside the probe. Storage capacity: 32.000 readings per input.

Storage interval and printing can be configured between one second and 1 hour.

RS232C serial output: from 300 up to 115.200 baud rate.

Immediate or deferred print-out.

Stored data can be displayed and stored data blocks can be deleted.

Automatic shutout after 8 minutes can be disabled.

Units of measurement can be selected according to the physical quantity of the connected probe.

Firmware update through RS232C serial port. Different types of SICRAM modules or probes can be connected to the input: Platinum sensor temperature, thermocouple, relative humidity/temperature, Discomfort index, continuous voltage ( $\pm 20V$ ), current (0...24mA), pressure, air speed and light.

### VP472

module to connect pyranometers or albedometers. The measurements produced during the time by a pyranometer or an albedometer can be taken, verified and stored. The signal produced by the thermopile can be read in mV or in W/m<sup>2</sup>, the net radiation of the albedometer is read in W/m<sup>2</sup>. The thermopile sensitivity can be set from 5000 to 30000nV/(Wm<sup>-2</sup>) that is between 5 and 30µV/(Wm<sup>-2</sup>)

### VP473

module for reading the continuous voltage. When connected to the output of a transmitter with voltage signal it can read and take the relevant value. Measuring range: ±20Vdc. Input impedance: 1MΩ.
